Released February 2015

Settler CL Most Popular Winter Wheat Variety Planted for 2014

Top 3 Varieties

Settler CL was the top selling wheat seed in 2014. Settler CL is a semi dwarf hard red winter wheat that may be used as a component of the BASF CLEARFIELD production system. Settler CL was released primarily for its adaptation to rainfed wheat production systems in Nebraska. On average, plant height is 29 inches. It is moderately late in maturity and has moderate straw strength. Settler CL is moderately resistant to stem rust, stripe rust, and to wheat soil borne mosaic virus. End use quality was rated good. Non-complementary varieties include: Wesley, Millennium and Above.

SY Wolf is a semi-dwarf hard red wheat variety with excellent straw strength and medium maturity. It has very good test weight, straw strength and winter hardiness. It was developed, produced, and marketed exclusively under the AgriPro brand name. It is a short plant and has good resistance to several diseases including leaf rust, stem rust, tan spot, and soil borne diseases. It has moderate resistance to stripe rust. SY Wolf does not have any non-complementary varieties.

Overland is a hard red winter semi-dwarf with a mature plant height of about 33 inches. Overland is moderately late in maturity and should be considered as a possible replacement for Arapahoe, Culver, Millennium, and Wesley. It has moderate straw strength and is moderately resistant to leaf rust, stripe rust and Hessian fly. Overland also appears to have tolerance to wheat streak mosaic virus. Non-complementary varieties include: Arapahoe, Culver, Millennium, Wahoo and Niobrara.

Varieties of wheat sold to NE producers in 2012

Variety	% of 50# bu. sold
Settler CL	16.82
SY Wolf	16.21
Overland	7.50
Brawl CL Plus	6.64
Winterhawk	5.75
AP503 CL2	5.42
